GiggleGit

Vanilla git power user
- Copy github not to the point of a lawsuit, but copy it close enough such that a github power user is familiar enough to use the tools.
- As a vanilla git power-user that has never seen GiggleGit before, I want to see how GiggleGit integrates with my pre-existing GitHub environment, and I also want to LOL whenever my teammates and I push our merges.
- As a team lead onboarding an experienced GiggleGit user, I want to ensure that onboarding new users to GiggleGit will 1) be simple, and 2) will improve quality of life and morale for new hires.
    - Need some sort of enterprise feature that allows us to work as an organization
    - Need to be able to be billed as an organization for simple record keeping.
    - Need to have enough space to store all of our projects.
    - Need to have the ability to add custom merging memes to ensure compliance with the BMFP standard (Business memes for professionalism)

- As a project manager, I want to ensure that I can monitor the state of a project and keep tabs on everyone's commits and merges, while ensuring that the perfect meme for each merge is being used.
    - This would include being able to upload custom company memes, and to be able to have a starred tab for our custom memes.
        - Sort memes by folders, have different directories for each family of memes.
        - Allow for easy uploads of memes (JPG, PNG and GIF support)
        - Load preview images for memes.
    - The ability to monitor ongoing projects from a top down perspective.
        - See all commits, be able to sort by users.
        - Monitor all merges
            - Have version control so that I can roll back changes if needed.

- As a user I want to be able to authenticate on a new machine

This is a functional requirement, not a user story. This is a feature that is functionally required for every single user regardless of their respective story.

SnickerSync

Goal - Ensure SnickerSync provides a fun and engaging experience, enhancing productivity and collaboration through the "snickering" feature.

Non-goal - Integrate SnickerSync with third-party version control softwares beyond GiggleGit.

Non-functional requirements

SnickerSync should have multiple user groups to allow program managers to control things from the top down. Should include tools for the PM to effectively manage projects.

- PM should have a role-based dashboard for managing access to repositories and projects, along with an ability to manage things from the top down.
- Only PMS should have access to this dashboard, there must be some division of user power. Create different user groups for various tasks.

Make sure users can integrate with other version control systems, to allow previous projects to get imported into the system.

- Users should be able to easily upload files and directories to the snickersync platform.
- When bringing projects over to the platform, there should be a snickering sound to 1) put a smile on the devs face, 2) provide an auditory response to a completed action.
